1st: Aspect 7 (Manipulate numbers... and information)

- **Analysis:** This is the core operation of the problem. The student must extract the row "Engine capacity" from the table and manipulate/compare four decimal values (1.79, 1.796, 1.82, 1.783) to identify the minimum.

2nd: Aspect 5 (Understand and utilise constructs based on... rules... including employing familiar algorithms)

- **Analysis:** Solving this requires applying the mathematical rules and algorithms for comparing decimals (e.g., aligning decimal points and comparing the tenths, hundredths, and thousandths places). This is a fundamental application of formal mathematical systems.

3rd: Aspect 10 (Make sense of, relate and use a variety of representations)

- **Analysis:** The student must make sense of the table as a representation. They need to relate the row label (Engine capacity) to the values in the corresponding columns, demonstrating an understanding of how information is organized in this format.

4th: Aspect 6 (...extracting mathematical information from them)

- **Analysis:** The problem specifically asks the student to extract specific mathematical data (the engine capacity values) from a given diagram (the table) before any comparison can take place.

第一位：方面 7 (Manipulate numbers... and information)

- **分析：** 这是本题最核心的操作。学生必须在表格信息中提取“发动机排量（Engine capacity）”这一行的数据，并对四个十进制数值（1.79, 1.796, 1.82, 1.783）进行大小比较和处理，从而找出最小值。 (p. 1)

第二位：方面 5 (Understand and utilise constructs based on... rules... including employing familiar algorithms)

- **分析：** 解决此题需要运用比较小数大小的规则和算法（例如：对齐小数点，逐位比较十分位、百分位和千分位）。这属于数学中的基础定义和规则应用。

第三位：方面 10 (Make sense of, relate and use a variety of representations)

- **分析：** 学生需要理解表格这种表达方式（Representation），并将行标签（Engine capacity）与对应列的数值联系起来。这涉及到对数学呈现形式的理解和使用。 (p. 1)

第四位：方面 6 (Extracting mathematical information from them)

- **分析：** 题目要求从给定的图表（表格）中提取特定的数学信息（各车型的排量数值）。这是进行任何计算或比较的第一步。 (p. 1)
