1️⃣ Employ 7 (Most Relevant)

Manipulate numbers, graphical and statistical data and information. employ

Reason

Students need to process the following data:

- Alpha: 1.79
- Bolte: 1.796
- Castel: 1.82
- Dezal: 1.783

The core operation is:

👉 **comparing multiple decimal numbers to find the smallest value**

This is a typical example of:

- numerical manipulation
- data comparison

Therefore, this is the **core competency** assessed in this problem.

2️⃣ Employ 1

Perform a simple calculation. employ

Reason

Although no complex calculation is required:

👉 comparing decimals inherently involves basic numerical processing

Students need to:

- understand place value (e.g., 1.79 vs 1.783)
- perform implicit calculations (digit-by-digit comparison)

Thus, this reflects:

basic computational skills

3️⃣ Employ 10

Make sense of, relate and use a variety of representations. employ

Reason

The problem uses:

👉 **a tabular representation**

Students must:

- locate the “engine capacity” column
- extract relevant values
- convert them into a comparable set of numbers

This reflects the ability to:

interpret and use data from tabular representations

4️⃣ Employ 3

Implement a given strategy to determine a mathematical solution. employ

Reason

The implicit strategy is:

👉 “compare all values → identify the smallest”

Students need to execute this standard procedure:

1. Extract the data
2. Compare values
3. Determine the minimum

This reflects the ability to:

apply a standard problem-solving procedure

5️⃣ Employ 5 (Less Relevant)

Understand and utilise constructs based on definitions and rules. employ

Reason

Students need to understand:

- the mathematical meaning of “smallest” (minimum value)
- the rules for comparing decimal numbers (place value principle)

Thus, this reflects:

using mathematical definitions and rules

1️⃣ Employ 7（相关性最高）

Manipulate numbers, graphical and statistical data and information. employ

体现原因

学生需要对以下数据进行处理：

- Alpha：1.79
- Bolte：1.796
- Castel：1.82
- Dezal：1.783

核心操作是：

👉 比较多个小数大小，找出最小值

这属于典型的：

- 数值处理（number manipulation）
- 数据比较（data comparison）

因此这是本题最核心的能力。

2️⃣ Employ 1

Perform a simple calculation. employ

体现原因

虽然没有复杂运算，但：

👉 小数比较本质上属于基础计算能力的一部分

学生需要：

- 理解小数位（如 1.79 vs 1.783）
- 进行隐性计算（位值比较）

因此属于：

基础计算技能的应用

3️⃣ Employ 10

Make sense of, relate and use a variety of representations. employ

体现原因

题目使用的是：

👉 **表格表示（tabular representation）**

学生需要：

- 从表格中定位“engine capacity”这一列
- 将其转化为可比较的数值集合

体现了：

从表格表示中提取并使用数据的能力

4️⃣ Employ 3

Implement a given strategy to determine a mathematical solution. employ

体现原因

题目隐含的解题策略是：

👉 “比较所有数值 → 找最小值”

学生需要执行这一标准策略：

1. 提取数据
2. 逐一比较
3. 得出最小值

属于：

执行既定解题流程的能力

5️⃣ Employ 5（次相关）

Understand and utilise constructs based on definitions and rules. employ

体现原因

学生需要理解：

👉 “smallest” 的数学含义（最小值）

以及：

👉 小数大小比较规则（位值原则）

因此体现了：

基于数学规则进行判断的能力
