1. **12.Use a multi-step procedure leading to a mathematical solution, conclusion or generalisation**
    - Solving this problem requires a **multi-step process**. First, the user must extract the exact sales data for The Kicking Kangaroos band for each month (February to June) from the chart (1750, 1500, 1300, 900, 600). Then, the user needs to analyze this data to determine the monthly downward trend (e.g., using a linear model). Finally, using this determined trend (e.g., a drop of approximately 300-400 units per month), extrapolate the sales for July and select a reasonable answer from the multiple choices.
2. **7.Manipulate numbers, graphical and statistical data and information, algebraic expressions and equations, and geometric representations**
    - The core of this task is the **manipulation** and processing of **graphical data** (the bar chart). Users need to convert graphical information into numerical data and then perform arithmetic operations on these numbers (subtraction, averaging, prediction), which involves mathematical analysis and manipulation skills.
3. **13.Use an understanding of the context to guide or expedite the mathematical solving process, e.g. working to a context-appropriate level of accuracy**
    - The problem provides a real-world **context**: a downward trend in record sales. Understanding that this is a **situation** about actual CD sales helps guide the solving process, for instance, the result should be a reasonable positive integer (number of CDs), not a negative number or a fraction. Contextual knowledge helps the user select the most appropriate answer; for example, if the trend is a drop of about 300 units per month, then the sales after 600 units might be around 300 units (option B), not 70 or 1340 units.
4. **10.Make sense of, relate and use a variety of representations when interacting with a problem**
    - Users need to relate the written text description ("same negative trend continues") to the **graphical representation** (the bar chart) and the **numerical representations** (the numbers in the multiple choices). Understanding and using these different representations is key to solving the problem.

1. **12.Use a multi-step procedure leading to a mathematical solution, conclusion or generalisation**
   - 解决此问题需要一个**多步骤的过程**。首先，用户必须从图表中提取 The Kicking Kangaroos 乐队每个月（2 月至 6 月）的准确销量数据（1750、1500、1300、900、600）(p. 1)。然后，用户需要分析这些数据以确定月度下降的趋势（例如，使用线性模型）。最后，利用这个确定的趋势（例如，每月约下降 300-400 张），推断 7 月份的销量，并从多项选择中选择一个合理的答案。
2. **7.Manipulate numbers, graphical and statistical data and information, algebraic expressions and equations, and geometric representations**
   - 此任务的核心是**操作**和处理**图形数据**（柱状图）。用户需要将图形信息转换为数字数据，然后对这些数字进行算术运算（减法、平均值、预测），这涉及数学分析和操作技能。
3. **13.Use an understanding of the context to guide or expedite the mathematical solving process, e.g. working to a context-appropriate level of accuracy**
   - 该问题提供了一个现实世界的**背景**：唱片销量的下降趋势 (p. 1)。理解这是一个关于实际 CD 销量的**情境**，有助于指导解决过程，例如，结果应该是一个合理的正整数（CD 数量），而不是负数或小数。背景知识可以帮助用户选择最合适的答案，例如，如果趋势每月下降约 300 张，那么 600 张销量后的下一个月销量可能是 300 张左右（选项 B），而不是 70 张或 1340 张 (p. 1)。
4. **10.Make sense of, relate and use a variety of representations when interacting with a problem**
   - 用户需要将书面文字描述（“下降的负面趋势”）与**图形表示**（柱状图）和**数字**表示（多项选择中的数字）联系起来。理解并利用这些不同的表示形式是解决问题的关键。
