1. **Use an understanding of the context to guide or expedite the mathematical solving process (13)**
   The solver must recognize that the total spent includes a fixed membership fee and variable rental costs, and that the same number of DVDs is rented in both scenarios. This contextual understanding is essential to correctly set up the equation.
2. **Make sense of, relate and use a variety of representations when interacting with a problem (10)**
   The problem is presented in text and a table; the solver needs to translate these into mathematical expressions (e.g., cost = fee + rate × number) and then interpret the result back into the context.
3. **Manipulate numbers, graphical and statistical data and information, algebraic expressions and equations, and geometric representations (7)**
   The core task involves manipulating numbers (10, 2.5, 52.5) to form and solve a simple linear equation, then multiplying to find the non-member cost.
4. **Use a multi-step procedure leading to a mathematical solution, conclusion or generalisation (12)**
   The solution requires multiple steps: subtract the membership fee, divide by the member rental rate to find the number of DVDs, then multiply by the non-member rate.
5. **Understand and utilise constructs based on definitions, rules and formal systems including employing familiar algorithms (5)**
   The problem relies on understanding the defined pricing rules for members and non-members, and applying basic arithmetic algorithms.
6. **Perform a simple calculation (1)**
   The final step involves simple arithmetic operations (addition, subtraction, multiplication, division) to obtain the numerical answer.

1. **利用对情境的理解来指导或加快数学求解过程 (13)**
   解题者必须认识到总花费包含了固定的会员费和可变的租赁费，并且在两种情况下租赁的DVD数量是相同的。这种对情境的理解对于正确建立方程至关重要。
2. **在解决问题时理解、关联并使用多种表现形式 (10)**
   问题以文本和表格的形式呈现；解题者需要将这些信息转化为数学表达式（例如，花费 = 会员费 + 单价 × 数量），然后将结果再放回情境中进行解释。
3. **操作数字、图形和统计数据与信息、代数表达式与方程以及几何表示 (7)**
   核心任务涉及操作数字（10, 2.5, 52.5）来构建并求解一个简单的一次方程，然后进行乘法运算以求出非会员的总花费。
4. **使用多步程序得出数学解、结论或概括 (12)**
   解决方案需要多个步骤：减去会员费，除以会员租赁单价以求出DVD数量，然后再乘以非会员单价。
5. **理解并利用基于定义、规则和形式系统的结构，包括运用熟悉的算法 (5)**
   问题依赖于理解已定义的会员和非会员定价规则，并应用基本的算术算法。
6. **执行简单的计算 (1)**
   最后一步涉及简单的算术运算（加、减、乘、除）以获得数值答案。
