1. **Item 4: Read, decode and make sense of statements, questions, tasks, objects or images to create a model of the situation**
   Students need to understand the text description and the table data, clarifying the membership fee, the two different rental rates, and the problem's goal ("cover the cost"). This is the foundation for building a model.
2. **Item 6: Identify and describe the mathematical aspects of a real-world problem situation including identifying the significant variables**
   Students must extract the mathematical elements: the membership fee (10 zeds), the non-member rental fee (3.20), the member rental fee (2.50), and the implicit variables—the number of DVDs rented (x) and the total amount saved.
3. **Item 5: Recognize mathematical structure (including regularities, relationships, and patterns) in problems or situations**
   Students need to discover that the savings are proportional to the number of DVDs rented, i.e., saving 0.70 zeds per DVD, with total savings of 0.70x, needing to reach or exceed 10 zeds. This represents a linear relationship.
4. **Item 9: Translate a problem into a standard mathematical representation or algorithm**
   Students need to construct a mathematical model, such as the inequality $0.70x \geq 10$ or the equation $0.70x = 10$, thereby transforming the real-world problem into an algebraic one.
5. **Item 12: Identify the constraints, assumptions simplifications in a mathematical model**
   Students must consider practical constraints: the number of DVDs must be an integer (cannot rent a fraction of a DVD), and "cover the cost" means the savings must at least equal the membership fee, therefore requiring the smallest integer solution, $x = 15$.

1. **第4条：阅读、解码并理解问题陈述、任务、图像，以建立情境模型**
   学生需理解文字描述和表格数据，明确会员费、两种租金标准以及问题目标（“cover the cost”），这是建模的基础。
2. **第6条：识别并描述现实问题情境中的数学方面，包括识别重要变量**
   学生需提取数学要素：会员费（10 zeds）、非会员租金（3.20）、会员租金（2.50），以及隐含的变量——租DVD数量（x）和节省的总费用。
3. **第5条：识别问题中的数学结构（规律、关系和模式）**
   学生需发现节省费用与租碟数量成正比，即每张DVD节省0.70 zeds，总节省为0.70x，需要达到或超过10 zeds，这是一个线性关系。
4. **第9条：将问题转化为标准的数学表示或算法**
   学生需建立数学模型，如不等式 $0.70x \geq 10$ 或方程 $0.70x = 10$，从而将现实问题转化为代数问题。
5. **第12条：识别数学模型中的约束、假设和简化**
   学生需考虑实际约束：DVD数量必须为整数（不能租部分张），且“覆盖费用”意味着节省至少等于会员费，因此需取最小整数解 $x = 15$。
