1. **Item 5: Understand and utilise constructs based on definitions, rules and formal systems including employing familiar algorithms**
   Students need to understand the definition of average speed (distance divided by time) and apply this rule to perform calculations and comparisons, which is the core of solving the problem.
2. **Item 1: Perform a simple calculation**
   The question requires calculating the average speed for two time periods, involving division operations (4 km ÷ 10 minutes and 2 km ÷ 5 minutes), which are basic arithmetic tasks.
3. **Item 7: Manipulate numbers, graphical and statistical data and information, algebraic expressions and equations, and geometric representations**
   Students need to process the given distance and time data and perform numerical comparisons, which involves basic manipulation of numbers.
4. **Item 12: Use a multi-step procedure leading to a mathematical solution, conclusion or generalisation**
   The problem-solving process consists of two steps: first, calculate the two average speeds separately, and then compare them. Although simple, it involves multi-step reasoning.
5. **Item 13: Use an understanding of the context to guide or expedite the mathematical solving process, e.g. working to a context-appropriate level of accuracy**
   Understanding the meaning of "average speed" in the context of cycling and paying attention to the consistency of time units (either comparing directly in minutes or converting to hours) reflects the ability to combine practical context with problem-solving.

1. **第5条：理解并利用基于定义、规则和形式系统的构造，包括使用熟悉的算法**
   学生需要理解平均速度的定义（距离除以时间），并运用这一规则进行计算和比较，这是解题的核心。
2. **第1条：执行简单计算**
   题目要求计算两个时间段的平均速度，涉及除法运算（4 km ÷ 10 min 和 2 km ÷ 5 min），属于基础算术操作。
3. **第7条：操作数字、图形和统计数据**
   学生需要处理给定的距离和时间数据，进行数值比较，这属于对数字的基本操作。
4. **第12条：使用多步程序**
   解题过程包含两个步骤：先分别求出两个平均速度，再比较它们的大小，尽管简单，但属于多步推理。
5. **第13条：使用对上下文的理解**
   理解“平均速度”在骑行情境中的含义，并注意时间单位的一致性（可直接用分钟比较或换算为小时），体现了结合实际问题进行求解的能力。
