1. Perform a simple calculation (Relevance: Very High)

This is the core operation of the problem. To answer the question, one must calculate the average speed for both intervals:

- **First interval:** $4 \text{ km} \div 10 \text{ min} = 0.4 \text{ km/min}$ (p. 1)
- **Second interval:** $2 \text{ km} \div 5 \text{ min} = 0.4 \text{ km/min}$ (p. 1)
  The problem directly requires these fundamental division operations.

5. Understand and utilise constructs based on definitions, rules... (Relevance: High)

The problem requires students to understand and apply the definition of "average speed" and its formula ($\text{Speed} = \text{Distance/Time}$). This falls under utilizing mathematical constructs and rules to solve a problem. Students must recognize that since the ratios are equal, the speeds are identical (p. 1).

2. Select an appropriate strategy from a list (Relevance: Medium)

The question provides four statements (A, B, C, D). Students must use their calculated results to identify which strategy/statement correctly describes the mathematical reality (Option B: average speed was the same) (p. 1).

13. Use an understanding of the context to guide... (Relevance: Medium)

The context involves Helen's bike trip and her speedometer. Students need to translate this real-life scenario (distance and time) into a mathematical model. Understanding the context helps the student realize they are comparing rates of change (p. 1).

1. Perform a simple calculation (相关性：极高)

这是本题的核心操作。要回答问题，必须计算两个时间段内的平均速度 (p. 1)。

- **第一阶段：** $4\ \text{km} \div 10\ \text{min} = 0.4\ \text{km/min}$
- **第二阶段：** $2\ \text{km} \div 5\ \text{min} = 0.4\ \text{km/min}$
  题目直接考查了这种基础的除法运算 (p. 1)。

2. Understand and utilise constructs based on definitions... (相关性：高)

题目要求学生理解并运用“平均速度”的概念及公式（速度 = 距离 / 时间）(p. 1)。这属于利用数学定义和规则来解决问题的范畴。学生必须知道即使时间单位不同，只要比例一致，速度就是相同的 (p. 1)。

3. Select an appropriate strategy from a list (相关性：中)

题目给出了 A、B、C、D 四个选项。学生需要通过计算得出的结果，从这些给定的陈述中筛选出唯一正确的数学结论（选项 B：平均速度相同）(p. 1)。

4. Use an understanding of the context to guide... (相关性：中)

题目背景是 Helen 骑车及速度计的使用 (p. 1)。学生需要将生活情境（骑行距离和时间）转化为数学模型进行处理。理解这种现实语境有助于学生意识到他们正在计算的是一种变化率。
