1. **Item 5: Understand and utilise constructs based on definitions, rules and formal systems including employing familiar algorithms**
   Students must grasp the definition of average speed (speed = distance / time) and be able to rearrange it to time = distance / speed. This is the core mathematical rule for solving the problem.
2. **Item 1: Perform a simple calculation**
   The question requires calculating the time, specifically 6 km ÷ 18 km/h = 1/3 hour, which is a basic division operation.
3. **Item 13: Use an understanding of the context to guide or expedite the mathematical solving process, e.g. working to a context-appropriate level of accuracy**
   Understanding the practical meaning of "average speed" in the context of cycling and paying attention to unit conversion (km/h to minutes) requires handling the problem appropriately within its real-world context.
4. **Item 7: Manipulate numbers, graphical and statistical data and information, algebraic expressions and equations, and geometric representations**
   Students need to process the given numbers (6 and 18), perform a division, and convert the result (1/3 hour) into minutes (20 minutes). This involves numerical manipulation and unit conversion.
5. **Item 12: Use a multi-step procedure leading to a mathematical solution, conclusion or generalisation**
   The problem-solving process involves two steps: first calculating the time in hours, then converting it to minutes. Although simple, it still demonstrates multi-step reasoning.

1. **第5条：理解并利用基于定义、规则和形式系统的构造，包括使用熟悉的算法**
   学生必须掌握平均速度的定义（速度 = 距离 / 时间），并能将其变形为时间 = 距离 / 速度，这是解题的核心数学规则。
2. **第1条：执行简单计算**
   题目要求计算时间，即 6 km ÷ 18 km/h = 1/3 小时，属于基础的除法运算。
3. **第13条：使用对上下文的理解**
   理解“平均速度”在骑行情境中的实际意义，并注意单位（km/h 与分钟）的转换，这需要结合实际问题进行合理处理。
4. **第7条：操作数字、图形和统计数据**
   学生需处理给定的数字（6 和 18），进行除法运算，并将结果（1/3 小时）转换为分钟（20 分钟），涉及数值操作和单位换算。
5. **第12条：使用多步程序**
   解题过程包含两个步骤：先计算小时数，再转换为分钟，尽管简单，但仍体现了多步推理。
