1. Perform a simple calculation (相关性：极高)

这是解题最基础的一步。学生需要通过除法计算出时间：

- $6\ \text{km} \div 18\ \text{km/h} = \frac{1}{3}$ 小时。
- 随后将小时转换为分钟：$\frac{1}{3} \times 60$ 分钟 $= 20$ 分钟。 (p. 1)

5. Understand and utilise constructs based on definitions, rules... (相关性：极高)

题目要求学生熟练运用速度、距离、时间三者关系的定义公式（时间 = 距离/平均速度），并理解单位之间的换算规则（小时与分钟的转换）。这是解决此类物理应用数学题的标准算法。 (p. 1)

2. Select an appropriate strategy from a list (相关性：高)

题目提供了 A、B、C、D 四个选项。学生在计算出“20分钟”这一结果后，必须在给出的选项列表中识别并选择与之匹配的正确陈述（选项 A）。 (p. 1)

13. Use an understanding of the context to guide... (相关性：中)

学生需要将“骑车去姑姑家”这一生活情境转化为数学模型。理解平均速度在整个行程中的意义，能帮助学生快速判断计算出的时间是否符合常理（例如，排除 3 小时这种明显不符合骑行 6 公里常识的选项）。 (p. 1)

7. Manipulate numbers, graphical and statistical data... (相关性：中)

虽然不涉及代数式或几何图形，但该题涉及对具体数值（6 和 18）的操纵，以及对带有单位的物理量信息进行处理。 (p. 1)

1. Perform a simple calculation (Relevance: Very High)

This is the foundational step. To find the answer, a student must perform division and multiplication:

- $6 \text{ km} \div 18 \text{ km/h} = \frac{1}{3} \text{ hour}$.
- Then, convert hours to minutes: $\frac{1}{3} \times 60 \text{ minutes} = 20 \text{ minutes}$. (p. 1)

5. Understand and utilise constructs based on definitions, rules... (Relevance: Very High)

The problem requires the student to utilize the defined relationship between speed, distance, and time ($\text{Time} = \text{Distance}/\text{Average Speed}$). It also involves employing the familiar algorithm for unit conversion between hours and minutes. (p. 1)

2. Select an appropriate strategy from a list (Relevance: High)

The question presents four options (A, B, C, D). After calculating the result of "20 minutes," the student must evaluate the list and select the statement that matches their mathematical conclusion (Option A). (p. 1)

13. Use an understanding of the context to guide... (Relevance: Medium)

Students must translate the context of a bike trip into a mathematical model. Understanding the context helps in verifying if the answer is reasonable—for instance, realizing that 3 hours (Option C) is an unlikely duration for a 6 km bike ride at that speed. (p. 1)

7. Manipulate numbers, graphical and statistical data... (Relevance: Medium)

While it doesn't involve complex algebra, the task requires manipulating specific numerical data (6 and 18) and handling information expressed with physical units. (p. 1)
