① Aspect 12 (Most Central)

Use a multi-step procedure leading to a mathematical solution

Compared with qs1, *ice-cream-shop-qs2* typically requires more than a single calculation. Students must:

- Integrate multiple pieces of information (e.g. different products, time periods, or conditions)
- Carry out **several calculation steps in sequence**
- Build on intermediate results to reach a final conclusion

The main challenge lies not in the difficulty of any individual step, but in **correctly organising and executing a complete multi-step solution process**. Therefore, Aspect 12 is the most strongly represented.

---

② Aspect 7

Manipulate numbers, graphical and statistical data and information

Students are required to:

- Organise, combine, or compare multiple sets of numerical data
- Correctly handle relationships between quantities, amounts of money, and proportions

This question places higher demands on **numerical manipulation and integration** than qs1, making this aspect central to successful problem solving.

---

③ Aspect 3

Implement a given strategy to determine a mathematical solution

The problem usually implies or states a clear strategy (for example, “calculate each part separately, then combine or compare the results”). Students must:

- Understand the intended strategy
- **Correctly implement it through calculation**

The focus is on execution rather than strategy selection.

④ Aspect 1

Perform a simple calculation

Although the task involves multiple steps, each individual calculation typically consists of:

- Basic arithmetic operations
- Simple proportional or percentage calculations

While no single calculation is complex, **accuracy at each step** is essential to obtaining the correct final result.

---

⑤ Aspect 13

Use an understanding of the context to guide the solving process

Within the real-world **ice-cream shop context**, students must:

- Recognise which calculations are meaningful
- Apply an appropriate level of accuracy (e.g. rounding to suitable monetary units)
- Interpret comparisons or conclusions in a realistic way

Contextual understanding helps students **avoid mechanical computation and ensure that results are reasonable**.

---

⑥ Aspect 8

Articulate a solution, showing or summarising intermediate results

In a complete response, students are often expected to:

- Show key intermediate calculations
- Clearly present the final conclusion (e.g. total amount, better option, or final comparison)

Although not the most central aspect, **clear communication of the solution process and results** remains an important component of assessment.

① Aspect 12（最主要体现）

Use a multi-step procedure leading to a mathematical solution

📌 与 qs1 相比，*ice-cream-shop-qs2* 通常不再是单一计算，而是要求学生：

- 综合多条信息（如不同产品、不同时间或不同条件）
- 按顺序完成 **多个计算步骤**
- 在中间结果基础上得到最终结论

👉 解题的关键不在某一步的难度，而在于 **正确组织并执行一个完整的多步骤求解过程**，因此 Aspect 12 是最核心的能力。

---

② Aspect 7

Manipulate numbers, graphical and statistical data and information

📌 学生需要：

- 对多组数值信息进行整理、比较或合并
- 正确处理金额、数量、比例等之间的数量关系

👉 本题对**数值操作与整合能力**的要求高于 qs1，是解题成功的基础。

---

③ Aspect 3

Implement a given strategy to determine a mathematical solution

📌 题目通常已经隐含或明确给出解题思路（例如“先分别计算，再合并比较”），学生需要：

- 理解这一策略
- 按要求 **正确执行该策略**

👉 重点不在策略选择，而在于**是否能把给定策略落实为正确计算。**

④ Aspect 1

Perform a simple calculation

📌 虽然题目包含多个步骤，但每一步所需的计算通常仍然是：

- 基本四则运算
- 简单比例或百分比计算

👉 单个计算并不复杂，但**计算的准确性**对最终结果至关重要。

---

⑤ Aspect 13

Use an understanding of the context to guide the solving process

📌 在“冰淇淋店”这一现实情境下，学生需要：

- 判断哪些结果在情境中有意义
- 采用合适的精度（如货币单位的四舍五入）
- 理解比较或结论在现实中的含义

👉 情境理解帮助学生 **避免机械计算，确保结果合理。**

---

⑥ Aspect 8

Articulate a solution, showing or summarising intermediate results

📌 在完整作答中，通常需要：

- 展示关键中间计算
- 清楚表达最终结论（如哪种方案更优、总金额是多少等）

👉 虽不是最核心，但**清晰呈现解题过程与结果**仍是评价的重要组成部分。
